

DUPESSÉY&CO IS TRANSITIONING TO ELECTRIC POWER!

DUPESSÉY&CO proudly reveals its new electric project today, a result of collaboration with Renault Trucks, our long-standing partner.

Innovation is ingrained in the core of DUPESSÉY&CO, and this recent electric initiative signals a bright future, featuring 7 **electric charging stations** situated at our Corbas site (69) in the Rhône region. These stations provide a flexible charging solution with a combined capacity of 400KW, accommodating both slow and rapid charging. Additionally, we have procured 5 **E-tech T tractors** branded with the DUPESSÉY&CO logo.

This territorial approach enables a profound comprehension of our clientele's specific needs. Our market knowledge in this strategic region enhances our competitive position and provides us with a unique territorial advantage.

Our objective is to advance **technological** and **economic** frontiers through the creation of inventive solutions that cater to the ever-changing requirements of our clientele.

Our decision to partner with Renault Trucks is rooted in a longstanding, trust-based relationship and shared objectives. Therefore, collaborating with them on this particular project is in line with our commitment to further strengthen our foundation and deliver outstanding outcomes.

Our Value Addition: Our Technical and Technological Guidance

For years, our company has made a substantial improvement by investing in a Technical and Technological direction and a design office. This is now our core competency and unique selling point. This move was driven by our dedication to enhancing operational efficiency and creating cutting-edge transport solutions.

This strategic direction has been central to our approach, yielding visible results that validate its value. Furthermore, we have no intention of halting our progress.

Advancing Towards CSR Commitment!

This electrical project signifies a significant milestone for our team.

DUPESSÉY&CO actively participates in the shift towards sustainable energy solutions. Embracing an electric future, we are dedicated to discovering innovative approaches to effectively and eco-consciously fulfill our clients' energy requirements. As estimated by ADEME, this initiative is projected to decrease our greenhouse gas emissions by around 300 tons within a six-year timeframe.

Our vision is precise: we aim to provide our customers with additional energy, clean and electric energy, for **greener transportation**.

Stay connected for further updates on the project's future developments!

REGARDING THE DUPESSEY&CO GROUP

DUPESSEY&CO is an autonomous French organization, **headquartered in Rumilly (74)**, in Haute-Savoie. With more than **55 years of experience**, we are a Group comprising 550 dedicated individuals who diligently tackle daily tasks and are prepared to confront **future challenges**.
